Turn speed into output!

Automatic packer solutions for specialty folder gluers are specially designed to significantly increase the performance of the gluers and reduce the physical strain on qualified machine operators. This has a positive effect on the available staff resources.

The BAHMÜLLER POWERPACKER can be completely integrated into BOXFLOW® Solutions and is a significant component to achieve maximum performance.

Advanced high-performance drives and an intuitive operating concept provide maximum comfort. The BOXFLOW® Control fulfills the requirements for Industry 4.0.

The connection options to almost all specialty folder gluer extends the application possibilities.

Quality

Automatic packer solutions require complete quality control. A fully automatic production line requires a holistic quality control without the human factor. The human at the end of the processing machine will no longer be involved in quality monitoring.
BOXFLOW® Solutions provides monitoring capabilities for TURBOX and JETBOX which support an automated production process.

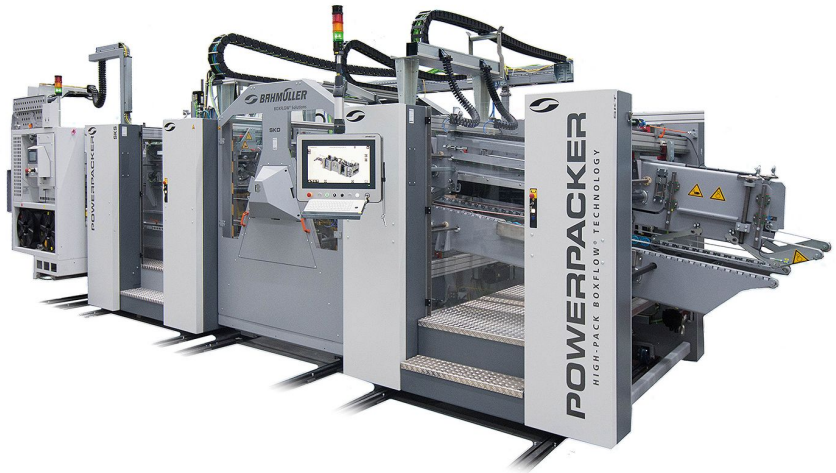

Quantity

The POWERPACKER can contribute to a significant increase in performance and maximum system availability. At the same time, the reject rate is substantially reduced.

Modularity

The freely configurable structure and the modular design allows optimal use of space, depending on performance requirements.
Increase your automated SFG-line to maximum output with our performance version, incl. speedmodul.

Direct connection options to downstream palletizing technology are possible.
A direct insertion in commercially available strapping systems as well as high-performance banding units offers optimal protection of the packaging.

Level of boxes

- Straight-line boxes
- Crash-lock boxes
- Crash-lock boxes with partition
- 4-corner boxes infold/outfold
- 4-corner boxes with cover
- 6-corner boxes
- Shelf-ready-packaging
- Multi-piece packaging

Type of board

- F, C, E, B, EE, EB, BC Flute
- Solid Board*

Automation with flexibility

The POWERPACKER has a wide technical product range, which offers the possibility to process nearly all types of boxes.
Benefit from the decades of experience of our process engineers, which have been incorporated into the machine concept.

The integrated rotary module ensures optimum processing of crash-lock and special design boxes. Any number of pieces and different patterns are possible.

A product comprehensive and sensitive blank-and-batch guidance allows many possibilities of perfect stacking images to differentiate in the market and to ensure perfect transportation through your intralogistics.

Size range

Format	min. mm	min. inch	max. mm	max. inch
Length folded	200 150*	7.8 5.9	1000	39.3
Width folded	300	11.8	1200	47.2
Batch height strapped	50	1.9	360	14.2
Stack height without strapping			400	15.7

Technical data can vary depending on machine equipment. / *Depending on grammage.

›BOXFLOW® Solutions‹

With our BAHMÜLLER BOXFLOW® Solutions we offer a comprehensive range of products with trend-setting functions and equipment that perfectly meet the wishes and requirements of the corrugated board converting industry with the highest quality ›Made in Germany‹.

With our production and development location in Germany and our sales and service companies, we are globally on site for our customers.
